

NAISH

FLOATER

SIZES: 140, 150

PERFORMANCE CHARACTERISTICS

- A Brand New Category of Twin Tips

As different as the Kite Wave is from the Alien, the Floater is different from all other twin tips.

- Waves and Speed

The Floater is tailored for wave riding and high-speed freestyle, especially with short lines.

- Effortless Freestyle

Most twins are designed to be ridden on edge. The Floater 140 excels when ridden flat. It requires a different style of balance, but once you take the time to dial into it, you'll appreciate the unique performance this design offers.

WHAT'S NEW IN DESIGN

- More Front Foot Power

The rail and bottom shape are designed so that greater pressure can be applied to your front foot for more power. This makes for effortless freestyle and riding at super high speeds.

- Smooth Transitions

With less "grip" than regular "square rails" boards, the Floater allows for super fast direction changing, ideal for riding with short lines.

- Full Surf Rails

The Floater is epic in the waves. Full surf rails give you greater drive in the bottom turn and more grip in the top turn. The Floater combines the feeling of a surfboard with all the creativity of riding a twintip.

WHAT'S NEW IN CONSTRUCTION

- Performance Balanced with Durability

The Floater utilizes the same technology we developed for the Kite Wave range. The medium-density core with a light-weight gelcoat finish is the ideal combination of performance and durability.
